

MULTISITE HOARDING

The Rethync **Multisite Hoarding** System is a high performance, long life, in ground steel hoarding system, designed primarily for housebuilders and construction companies which can be used on site after site.

Rethync Multisite is 2.4m high as standard, though this can be extended to 3m with extra security toppings (using extension arms for barbed wire or razor tape). Robust steel sheets are galvanised and polyester powder coated in white as standard (other colours are available as an optional extra). Posts and fittings are supplied in galvanised finish. The system is completed by 5.4m wide double leaf vehicle access gates and 1.1m wide pedestrian access gates; both designed to match the main body of the fence.

Product benefits include:

Cost Effective

Rethync Multisite can be used on site after site (other than the ground spigots which must be replaced) making it a very cost effective long term solution for repeat users such as housebuilders and construction companies. Rethync provides a take down, relocate, and re-erect service.

Environmentally Friendly

The reusability of Rethync Multisite makes it friendlier to the environment than timber which is regularly burnt at the end of the life of a site with more timber being used for the next site.

Positive Site Image

The uninterrupted outer face gives a continuous flowing appearance with all fixings concealed on the inside face of the system. The standard outer face colour is white but other colours are available on request.

Easy To Transport and Store

The system is assembled and when required, dismantled into efficiently storable and transportable components. Backstays are not normally required giving you full usage of the space inside any Rethync Multisite compound.

Life Expectancy

The robust specification and polyester coated hoarding sheets are expected to last well over 10 years so long as they are not subject to misuse or impact damage on site.

MULTISITE HOARDING

SUPPORT SERVICES

We also provide a full package of services in support of your investment in Rethync Multisite. These include:

- **Product life cycle management:** Initial site survey, installation, take down at the end of your project, relocation, storage and reinstallation at your next site.
- **Rethync Account Management:** Repeat customers are allocated a dedicated Key Account Manager so that you only have one person to deal with whatever your issue or query – no going round the departmental houses!
- **Training of your installers:** If you prefer to use your own installers or sub-contractors we can provide them with on site installation training to ensure you get a quality finished product.
- **Sale and buy back:** If your need is 'one off' in nature or there is quite a gap between uses then we may be able to offer a sale and buy back package. Contact us for further details.
